Notes - 2004

Data issues: Data for 2004 are not available from the Bureau of Health Information and Policy until 2006.

a. Last Year's Accomplishments

NPM #8: The rate of birth (per 1,000) for teenagers aged 15 through 17 years

Impact on National Outcome Measures: Wisconsin's 2003 Youth Risk Behavior Survey reveals that 37% of students have ever had sex (down from 47% in 1993). Wisconsin's teen birth rate for preliminary 2003 ages 15-17 was 15.5 (Wisconsin Births and Infant Deaths, 2003) while the United States teen birth rate was 22.4 (National Vital Statistics Report, Vol. 53, No. 9, 2004). Since 1999, Wisconsin has experienced a decline in this rate. Ongoing efforts toward teen pregnancy prevention should continue this decline.

2004 Accomplishments:

1. Pregnancy and pregnancy prevention services for adolescents--Direct Health care Services--Adolescents

Through the performance-based contracts, a number of LHDs and others community --based organizations continued to provide perinatal and other health care services to teenagers, including reproductive health care. The Division of Public Health continued to administer grants to two

community-based organizations to provide pregnancy testing, counseling, education and intensive case management to over 100 high-risk pregnant and parenting teens.

2. Health education and training--Enabling Services--Adolescents

The Adolescent Pregnancy Prevention Committee conducted three statewide teleconferences with state, local and community stakeholders focused on the topics of the DHFS Family Planning Waiver; Abstinence/HIV/STD/Teen Pregnancy Prevention Strategies linkages to healthiest Wisconsin 2010; and the Importance of Relationship Education.

3. Implementation of Wisconsin's Medicaid family Planning Waiver--Population-Based Services--Adolescents

Wisconsin's Medicaid Family Planning Waiver (FPW) benefit was implemented January 2003. It provides family planning services and supplies for women 15 through 44 who are at or below 185% of the federal poverty level (FPL). The main goal of the project is to help women avoid unintended pregnancy. In 2004, the FPW benefit helped 15,763 female teen-aged 15-19 years old.

4. Abstinence activities and resource development--Infrastructure Building Services--Adolescents

The Wisconsin Abstinence Initiative for Youth (WAIY) continued to operate under the auspices of DPH in 2004. Accomplishments included the implementation of teen abstinence clubs across the state and the development of WAIY Teen Coordinators (True Life Youth Speaker Team) who functioned as leaders and liaisons for the clubs. Additionally, in 2004, DPH received a CDC-Abstinence/HIV/STD Supplemental Grant from the Department of Health and Family Services to improve the coordination, communication and collaboration amongst the above stakeholders. A community networking event for segments of the above stakeholders was held in 2004 for 42 participants.

Activities	Pyramid Level of Service			
	DHC	ES	PBS	IB
1. Pregnancy and pregnancy prevention services for adolescents	X			
2. Health education and training		X		
3. Implementation of Wisconsin's Medicaid Family Planning Waiver			X	
4. Abstinence activities and resource development				X

b. Current Activities

1. Pregnancy and pregnancy prevention services for adolescents--Direct Health Care Services--Adolescents

As in 2004, through the performance-based contracts, LHDs continue to provide perinatal and other health care services, including reproductive health care. Two revised contracts were issued to currently funded community-based agencies who will continue their reproductive health outreach efforts to high-risk pregnant and parenting teens.

2. Health education and training--Enabling Services--Adolescents

The Adolescent Pregnancy Prevention Committee (APPC) continues to redefine its role and mission to that of an information sharing network for a variety of partners and stakeholders involved in a range of prevention and reproductive efforts. For the spring of 2005, APPC will be hosting nine youth listening sessions across the state gathering their views and voices to help us better shape our program and policy direction.

3. Implementation of Wisconsin's Medicaid family Planning Waiver--Population-Based Services--Adolescents

The Family Planning Waiver benefit continues to provide direct pregnancy prevention and reproductive health to adolescents. A total of 16,382 were enrolled as of March 31, 2005.

4. Abstinence activities and resource development--Infrastructure Building Services--Adolescents

The Wisconsin Abstinence Initiative for Youth (WAIY) joined the effort of other state and community leaders and practitioners to attend a joint DHFS/DPI-CDC Abstinence/HIV/STD/Teen Pregnancy capacity building event in March, 2005. A total of 62 participants attended. CDC-DPI awarded DHFS another year of an Abstinence/HIV/STD Supplemental Grant to further our collaborative partnership efforts for these prevention and reproductive health stakeholders.

c. Plan for the Coming Year

1. Pregnancy and pregnancy prevention services for adolescents--Direct Health Care Services--Adolescents

In the fall of 2005, LHDs will enter into performance-based contracting negotiations for all LHDs and these agencies will choose from a number of perinatal and reproductive health objectives with which they will address in the 2006 calendar year. Additionally, it is anticipated that the two community-based grants for outreach to high-risk pregnant and parenting teens will continue under another revised contract.

2. Health education and training--Enabling Services--Adolescents

The Adolescent Pregnancy Prevention Committee (APPC) will provide an executive summary of the youth listening sessions held in 2005 and share them with all key members and stakeholders.

Additionally, APPC will work with the Health Care Education and Training agency to provide a statewide inventory and analysis of all key prevention and adolescent reproductive health organizations and providers for the purpose of identifying strengths, weaknesses, and gaps. This information will be shared with state and local partners.

3. Implementation of Wisconsin's Medicaid Family Planning Waiver--Population-Based Services--Adolescents

The Family Planning Waiver (FPW) outreach and services will continue to reach 15-44 year olds who are at or below 185% FPL.

4. Abstinence activities and resource development--Infrastructure Building Services--Adolescents

As part of continued CDC-DPI Abstinence/HIV/STD/Grant, The Division of Public Health and the Department Public Instruction will be developing a central website that will consist of key data on sexual risky behavior (teen births, HIV, STD, abstinence) for youth under the age of 20 covering the period of 1993-2003.
